Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) Ida Kantor, Jiri Matousek, Robert Samal

Mathematics++ is a concise introduction to six selected areas of 20th century mathematics providing numerous modern mathematical tools used in contemporary research in computer science, engineering, and other fields. The areas are: measure theory, high-dimensional geometry, Fourier analysis, representations of groups, multivariate polynomials, and topology. For each of the areas, the authors introduce basic notions, examples, and results. The presentation is clear and accessible, stressing intuitive understanding, and it includes carefully selected exercises as an integral part. Theory is complemented by applications-some quite surprising-in theoretical computer science and discrete mathematics. The chapters are independent of one another and can be studied in any order. It is assumed that the reader has gone through the basic mathematics courses. Although the book was conceived while the authors were teaching Ph.D. students in theoretical computer science and discrete mathematics, it will be useful for a much wider audience, such as mathematicians specializing in other areas, mathematics students deciding what specialization to pursue, or experts in engineering or other fields.

From reader reviews:

Charles Beaudoin:

Reading can called thoughts hangout, why? Because while you are reading a book specifically book entitled Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) your brain will drift away trough every dimension, wandering in every single aspect that maybe unidentified for but surely can be your mind friends. Imaging just about every word written in a book then become one application form conclusion and explanation that maybe you never get just before. The Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) giving you another experience more than blown away your thoughts but also giving you useful data for your better life within this era. So now let us explain to you the relaxing pattern the following is your body and mind are going to be pleased when you are finished reading it, like winning an activity. Do you want to try this extraordinary wasting spare time activity?

Maryanna Kuhns:

Do you have something that you prefer such as book? The book lovers usually prefer to pick book like comic, limited story and the biggest an example may be novel. Now, why not striving Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) that give your fun preference will be satisfied through reading this book. Reading practice all over the world can be said as the method for people to know world far better then how they react in the direction of the world. It can't be explained constantly that reading addiction only for the geeky man or woman but for all of you who wants to end up being success person. So , for all of you who want to start studying as your good habit, it is possible to pick Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) become your personal starter.

Gerald Reed:

You are able to spend your free time to read this book this reserve. This Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) is simple to deliver you can read it in the park your car, in the beach, train along with soon. If you did not include much space to bring typically the printed book, you can buy the e-book. It is make you easier to read it. You can save the particular book in your smart phone. And so there are a lot of benefits that you will get when you buy this book.

Victor Elias:

Many people said that they feel weary when they reading a book. They are directly felt it when they get a half regions of the book. You can choose the particular book Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) to make your own reading is interesting. Your current skill of reading talent is developing when you such as reading. Try to choose straightforward book to make you enjoy to see it and mingle the impression about book and looking at especially. It is to be very first opinion

for you to like to wide open a book and learn it. Beside that the e-book Mathematics++: Selected Topics Beyond the Basic Courses (Student Mathematical Library) can to be a newly purchased friend when you're sense alone and confuse in doing what must you're doing of their time.
