The Quest for Consciousness: A Neurobiological Approach Koch Christof

Consciousness is the major unsolved problem in biology. How do the elemental feelings and sensations making up conscious experience, the redness of red and painfulness of pain, arise from the concerted actions of nerve cells and their associated synaptic and molecular processes? Can such feelings be explained by modern science, or is some quite different kind of explanation needed? And how can this seemingly intractable problem be approached experimentally? Designed as an introduction to the field and drawing upon anatomical, physiological, clinical and psychological observations, this book seeks answers to these questions within a neurobiological framework; that is, how do the operations of the conscious mind emerge out of the specific interactions of myriads of neurons.
