Planet Eris and the Global Warming Cristian Negureanu

Dr. Cristian Negureanu brings out another of his outstanding works on the global considerations of human existence - this time it treats a subject of great interest today, namely the global warming of the planet. What is remarkable in his study are the links of the subject to the hypotheses of extraterrestrial interventions on Earth, including the origin of humans and the ancient history of the mankind. The author uses ancient writings (the Bible, the Koran, The Book of Enoch, and the Sumerian writings) as sources containing proofs of the extraterrestrial origin of humans and their links to planet Eris, which seems that it was a sort of station for some categories of extraterrestrials. Combining interpretations of the ancient writings (the book contains a great number of them) with the scientific facts regarding planet Eris, the author proves - and many scientists confirm his observations - that this celestial object is the sole cause of what is happening now on Earth with the climate. What is also interesting - and discussed in the book - is that NASA is aware of this information and has already taken some measures of surveillance of this planet through one of its launched space missions. The real cause of climate changes, volcanic activity, and the intensification of seismic activity is the approach to our solar system of the planet Eris, an intermediary named 2003 - UB - 313, known in Antiquity under various names such as Nibiru, Marduk, Nemesis, Hercolubus, The Gods' Planet, The Planet of the Empire, The Planet of the Cross, or The Red Planet. The planet Eris/Nibiru periodically comes closer to Earth once every 3,600 years and generates numerous climate changes, one being global warming with its natural consequence, the melting of the glaciers. The effect of glaciers melting, because of their sweet water, will be the ending of the thermo-saline natural system, the "engine" that allows the Gulfstream circulation to the North and the freezing of wide areas in northwestern Europe and northeastern United States. Briefly, here is the process that took place during the last two periods during which the Gods' planet has passed between Mars and Jupiter, its nearest point to Earth: - 7,200 years ago, during the cataclysm known as "Noah's flood," sudden changes in temperature, violent storms, and water avalanches from Antarctica broke off from their "ice prison." - 3,600 years ago, during the Jews' Exodus from Egypt in the middle of the second millennium B.C., the Earth suffered major upheavals. A celestial body entered our solar system and came very close to Earth, causing the eventual disappearance of the glacier layer. Now it is time for the planet Eris to pass again through our solar system, and we should expect the same climate changes. The effects of this astronomic event are already being seen worldwide, and they will get more acute in the next years. These are the facts around which the book is developed in a purely informative style, but nourished with biblical passages whose real interpretations are hard to accept initially, but which become quite clear when linked one to another. The book also contains over 80 suggestive photos. It is an enlightening journey through a history of mankind we never think about, which can help us not only to understand what is happening now with the human race, but also even to predict the near future.

From reader reviews:

Joshua Sigmund:

As people who live in the actual modest era should be revise about what going on or information even knowledge to make these people keep up with the era and that is always change and advance. Some of you maybe will update themselves by looking at books. It is a good choice for yourself but the problems coming to anyone is you don't know what one you should start with. This Planet Eris and the Global Warming is our recommendation to help you keep up with the world. Why, because this book serves what you want and wish in this era.

John Judge:

This book untitled Planet Eris and the Global Warming to be one of several books in which best seller in this year, that is because when you read this reserve you can get a lot of benefit on it. You will easily to buy this kind of book in the book retail store or you can order it by way of online. The publisher in this book sells the e-book too. It makes you quickly to read this book, as you can read this book in your Mobile phone. So there is no reason to you personally to past this reserve from your list.

Donald Lester:

The book untitled Planet Eris and the Global Warming is the guide that recommended to you to learn. You can see the quality of the reserve content that will be shown to an individual. The language that creator use to explained their way of doing something is easily to understand. The article writer was did a lot of research when write the book, hence the information that they share for your requirements is absolutely accurate. You also could get the e-book of Planet Eris and the Global Warming from the publisher to make you more enjoy free time.

Irma Murray:

It is possible to spend your free time to read this book this publication. This Planet Eris and the Global Warming is simple to create you can read it in the area, in the beach, train and soon. If you did not have much space to bring the printed book, you can buy typically the e-book. It is make you simpler to read it. You can save the actual book in your smart phone. Thus there are a lot of benefits that you will get when you buy this book.
